EPA Reg. No.: 67238-1 EPA Est. No.: 67238-PA-003

NET CONTENTS: 32 fl. oz. (946.4ml)

DIRECTIONS FOR USE

FOR RESIDENTIAL USE ONLY

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Hot Pepper Wax Insect Repellent repels aphids, cabbage loopers, beet armyworms, spider mites, and whiteflies.

USES: Use Hot Pepper Wax Insect Repellent to repel insects from fruit and vegetable plants, indoor/outdoor ornamentals, and grasses. Avoid use on Variegated African Violets, Sweet Basil, Parsley, Dicentra eximia, and fruit trees when in the pink bud stage until after the petals fall.

MIXING: Shake this product thoroughly before combining with water.

RATE: Mix Hot Pepper Wax Insect Repellent with water at the rate of 1 part of this product to 32 parts water. Vary this rate according to need. If the infestation is heavy, double the rate until pests are controlled. Once pests are under control, reduce the rate to half for maintenance.

DOUBLE RATE*	NORMAL RATE	HALF RATE
<i>(use when infestation is particularly heavy and more control is needed)</i>		<i>(for maintaining repellency once pests are under control)</i>
1:16 (1 part product to 16 parts water)	1:32 (1 part product to 32 parts water)	1:64 (1 part product to 64 parts water)
<small>*Double rate not for greenhouse use; see below.</small>		

APPLICATION: Apply this product using spray equipment as a foliar spray to the leaves, stems, fruits, and flowers of the plant until wet but not dripping. Good coverage of all portions of the plant will enhance repellency. Do not drench roots in soil or media. Do not apply this product through any type of irrigation system.

Do not apply when rain is expected within 24 hours. During hot and humid weather, spray plants in the evening. Avoid use when plants are stressed by drought. Discontinue use if burning occurs.

FREQUENCY: For best results, keep new growth coated. The repellency of this product is most effective on existing growth when applied every 7 to 14 days. More frequent application of up to every 3 days is appropriate when infestation is heavy. Use increased frequency only until pest numbers begin to decrease.

HOME GREENHOUSES: Do not exceed the 1:32 rate in greenhouses. Avoid use of this product if greenhouse temperature will exceed 85° F before the product has dried. Use spray equipment that will allow spray to contact all foliage surfaces.
